

Managed IaaS

Managed Azure IaaS provides customers with immense compute power, networking, storage, and scaling capabilities without the hassle of ongoing maintenance.

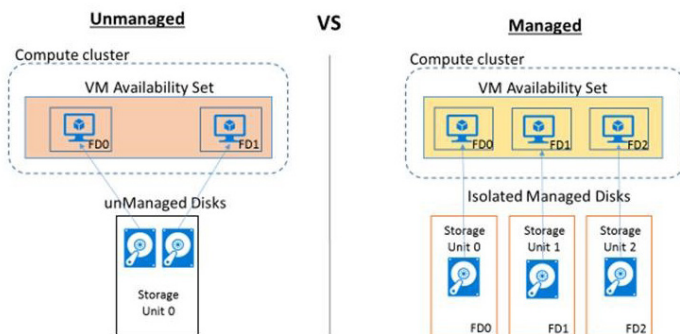

Service and Protection

Managed Azure IaaS platforms allow customers to replicate workloads running in an on-premise data center to Azure without the added costs of setting up a secondary data center.

In having a managed platform, customers are provided with full service from back to front end. Our managed platforms are guaranteed to be backed by 24/7/365 live human support within 15 minutes. Let us help shift you to agile development methodologies by embracing Azure's immutable infrastructure.

Benefits

- Enhanced business focus by offloading data center maintenance
- Superior ROI and shift from CAPEX to OPEX
- Enhanced security-encrypted communications and threat management
- Load balancers, traffic managers, powerful content delivery networks
- The ability to leverage MPLS investments in Azure
- Cost effective solution for nearline, online and highly available business needs

Worried about data protection?

Azure IaaS is backed by industry-leading security standards and compliance. With Managed Azure IaaS, you have the ownership of your data and Microsoft does not use customer data or derive information from it for advertising or data mining.

#1 in cloud and datacenter • Trusted for over a decade
Microsoft Partner of the Year 2012 & 2013 • Finalist in 2014, 2015, 2016, 2017, 2018
