

Managed PKI

Azure Hosted Public Key Infrastructure (PKI) is built to your requirements and available to you 24/7. Accessible, highly available PKI infrastructures can meet the needs of every single company.

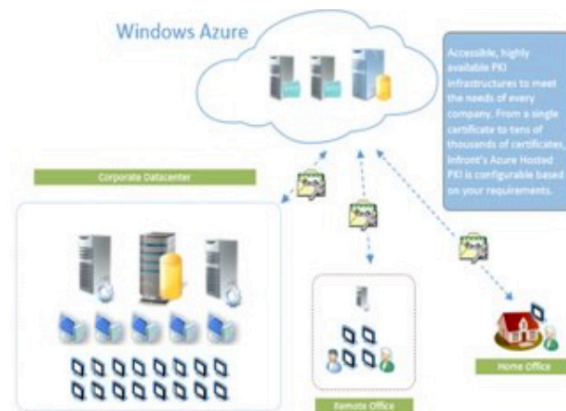

Managing Your Non-Core IT Infrastructure

Managing and maintaining a PKI of internal Certificate Authorities isn't your core business nor is it a common skillset to have on your IT team. Application requirements for certificates, however are becoming more common and the cost of public certificates from providers can be expensive.

Green House Data's Azure based, secure PKI solution allows your organization the flexibility of highly-available Certificate Authority architecture. Green House Data will build and manage your PKI environment for you, letting you request certificates for whatever purpose you require.

Benefits

- Centralization of certificate management
- Improved security
- Cost effective
- Reduced administration
- Highly available
- Fully customizable
- Consistent monthly costs
- Trusted platform
- Reduce operating costs by eliminating the process of maintaining certificate authority software
